

Industry Luminary Mark Leslie Joins Evergrid's Board of Directors

Evergrid Strengthens its Board of Directors with the Appointment of Founding Chairman and CEO of VERITAS Software

Santa Clara, Calif – June 3, 2008 -- Evergrid today announced that Mark Leslie, Managing Director of Leslie Ventures and founding Chairman and Chief Executive Officer of VERITAS Software, has joined the company's Board of Directors.

"I am extremely delighted to welcome Mark to the Evergrid Board. Mark brings a wealth of enterprise software industry expertise. His background makes him uniquely suited to provide strategic direction and support as Evergrid accelerates its growth," said Fred van den Bosch, CEO of Evergrid.

Leslie built VERITAS Software from a 12 person startup to a Fortune 1000 company with annual revenues of \$1.5 billion dollars. Prior to its sale to Symantec, VERITAS was the tenth largest independent software company by revenue and third largest by market capitalization. Leslie is currently the managing director of Leslie Ventures, a private investment company, and a lecturer at the Stanford Graduate School of Business.

"I am very excited to join Evergrid's Board as the company builds momentum in dynamic workload management and application availability software technologies," said Mark Leslie. "I have worked closely with Fred van den Bosch at VERITAS Software. I look forward to working with him and his team."

In addition to Evergrid, Leslie serves on the board of Network Appliance and a number of other privately held high technology companies. He also serves on the board of Overseers for the New York University Faculty of Arts and Sciences and is the Chairman of the New York University Science Advisory Board.

Leslie received a Bachelor of Arts degree in physics and mathematics from New York University and completed Harvard Business School's program for management development.

About Evergrid

Evergrid is a global leader in workload management and application availability software. Evergrid has developed unique technology for managing application execution and resource consumption, to enable data centers to combine optimal resource utilization with highest application quality of service. Evergrid's products provide fine-grained and accurate workload management and profiling, resource scheduling, and application-transparent high availability for grid and data center environments. Evergrid is based in Santa Clara, California. For more information, visit <http://evergrid.com> or call 1-866-922-GRID.
